

When you want
your files

DESTROYED

Windows 7
Compatible

After deleting files using the Windows® delete function it is a simple matter to retrieve them using any number of recovery utilities found on the Internet. This means that a file that is only deleted is easy prey for identity thieves. Credit cards, banking & loan information, passwords, Social Security numbers and other personal information all are at risk. Even emptying your Recycle Bin does not remove the data. But if PC Eraser™ is used instead of delete, file recovery becomes virtually impossible.

PC Eraser Swipes Your Hard Drive

- Select files to be erased.
- Click Destroy Now.
- Files are removed using US Government Department of Defense standards.
- PC Eraser's Scrub Free Space function removes traces of files that can be found in unallocated sections of the hard drive.
- Allows you to donate, sell or properly dispose of your old computer.

Minimum System Requirements

- Windows® 98SE, ME, 2000, XP, Vista32
- Processor: 90 Mhz or above
- Memory: 64 MB or higher for Windows® 98/ME
- 128 MB or higher for Windows® 2000/XP/Vista32
- FAT, FAT32 or NTFS formatted hard drive
- Requires 16 MB available hard drive space or better

Protect What You Want

PC Eraser gives you the option of protecting certain files types from permanent deletion using the Destroy function. This feature helps the user to protect certain file types from being destroyed by mistake. File extensions such as .exe, .dll and others can be protected so program functions can be saved while personal data files are destroyed.
